- Ultra slim design
- Robust 24K gold plated plugs
- Ideal for mobile applications

MP-cable 1MP-2RCA Audio - slim

Today's mobile units and devices such as smart phones, tablet computers, etc, usually provides for a 3.5 mm analogue output for headphones. Of course, it is also possible to connect these mobile devices to other audio devices, such as receivers or integrated amplifiers.

It is becoming increasingly popular with a hi-fi system of just a pair of active stereo speakers, a headphone set and on-line music providers in addition to a local music library on a NAS server, all accessible from mobile computer devices. We have developed two cables covering most mobile applications. The flexible dimension and sturdy, moulded, gold plated connectors, make them ideal for mobile use. Available in the most frequent lengths.

Supra MP - 2RCA

3.5 mm stereo mini plug to a pair of RCA connectors. Gold plated and fully shielded make them ideal for connecting your mobile device to your analogue hi-fi system or directly to your active speaker set-up.
